IVM 'FAST' System – Foliage And Stem Treatment

A cost effective solution to your invasive vegetation problem has arrived;

Invasive Vegetation Management & Treatment Limited (IVM) will produce a tailor-made program for your site, we work in with your time restraints, budget and ecological issues.

Gone are the days when complete eradication of Japanese knotweed could take up to 6 years or not be killed at all.

IVM's flagship methodology, known as the IVM 'FAST' System (Foliage and Stem Treatment) can guarantee eradication of Japanese knotweed & other invasive species in one growing season.

This advanced system uses the latest herbicides and application techniques to create a methodology that is cheaper and faster than its rivals.

The 'FAST' System uses different herbicides at different times of the year to kill different parts of the plant, in addition to the herbicides, products are applied to improve translocation rates, limit evaporation and assist the herbicide to adhere to the plant.

All treatments are covered up by a £5 million insurance backed guarantee for complete peace of mind.

More information regarding IVM's treatments, methodology's and contact details can be found on our website.
