

Case Study South London

Site - Retirement Home - South London

Planning - N/A

Problem - Rear of site heavily contaminated with Japanese knotweed which is spreading towards landscaped gardens and main buildings. Knotweed covering an area in excess of 4000 square metres, all previous treatments had been unsuccessful.

IVM Solution - Implementation of IVM 'FAST' System to eradicate Japanese knotweed. Site works commence in late May, with first herbicide treatment.

Site visits and treatments continue throughout the growing season, with Site Progress Reports being sent to the client on a monthly basis. The site was cleared by IVM and guaranteed in December.

The photographs above show the site at various stages during the treatment process.
