

## Case Study West Midlands

**Site** - Disability Centre, Sutton Coldfield, West Midlands.

**Planning** - Eradicate Japanese Knotweed from site.

**Problem** - Courtyard area of site contaminated with Japanese knotweed, excavation not viable as there is no machinery access to courtyard. One stand of Japanese knotweed was originally present on the site; this was spread around the area during landscaping operations. The courtyard area could not be used by the residents due to the knotweed damaging block paving causing a trip hazard.

**IVM Solution** - Implement IVM 'FAST' System eradication to courtyard area, allowing full eradication to be achieved.
